

## Industrial Water and Wastewater Systems Integration

For nearly a decade, Spiral Water Technologies has been committed to providing customers with powerful, best-in-class products engineered specifically to solve high solids filtration challenges. Our proven filtration and concentration solutions are helping customers in a variety of industries achieve their most challenging high solids water reuse and recovery goals.

As a leading water and wastewater system integrator, Spiral Water can provide the right filtration products for your commercial and industrial needs. We don't simply sell our patented systems. We'll also work with you to tailor our products to fit your particular needs or facility.

Examples include our **Pre R/O System**, which uses our Model 850 automatic self-cleaning filters that are capable of handling upset conditions up to 2,000 ppm without operator assistance. And our **High Solids Water Recovery (HSWR) System** is equipped with our Series 1000 self-cleaning filters, which can handle high solids loaded process water with TSS greater

than 15,000 ppm. We can also customize our control systems to meet our customer's specific needs or based on an existing control matrix.

In addition, Spiral Water can create **full custom systems** that incorporate our filters or develop a tailored solution that meets your specific requirements. We also have experience with consulting engineers and EPCs, as well as large end-user industrial customers in the high TSS processing space.

**Learn How Spiral Water's T1000 Saves 10-30% of OpEx for DAFs, MBRs & UF Membrane.**

## Benefits of Spiral Water Automatic Self-Cleaning Filters

When you integrate Spiral Water's [automatic self-cleaning filters](#) into your new or existing system, you gain access to the following benefits:

- **Lower operating costs.**
- **Reduced maintenance needs.**
- **Ease of installation and versatility.**
- **Customization capabilities.**
- **Turnkey systems integration.**
- **Fully customizable solutions.**
- **On-staff Professional Engineers (P.E.).**
- **Suitability for large end user industrial customers.**

We'd welcome the opportunity to discuss your upcoming project or walk you through our capabilities and experience! Contact us by email at [info@spiralwater.com](mailto:info@spiralwater.com) by phone at [1-732-629-7553](tel:1-732-629-7553) to learn more.

## Spiral Water Technologies — A Global Name

Spiral Water has an established a global presence as a member of the prestigious **Institut de la Filtration et des Techniques Séparatives** (IFTS – International Filter Testing Services), an independently regulated, ISO 17025 accredited, laboratory and research center and the world's leading organization dedicated to solid-liquid separation. Based in France, its operations include the **Roger Ben Aïm Test Center**, a renowned research and experimentation station that assesses the behavior of pilots and industrial equipment on real waters with different characteristics.
